Using this interface is similar to using a Unix shell, and is mostly used by expert users and computer scientists. A b i t e r There are two main categories of objects in AutoCAD: elements (things made up of shapes, lines, or other things) and measuring objects (shapes, surfaces, or any other thing used to define a length or area) elements, such as rectangles, circles, and lines, are stored in drawing units, which are described in the Units and Dimensions section of this article. measuring objects, such as measurements, distances, and angles, are stored in other units that are discussed in the Measurements section. T o p s The tool palette or toolbox is a tool used to open, close, and activate tools. The toolbox can be seen from the Edit menu. Each tool in the toolbox is named with a short sentence. For example, the rectangle tool is called "Draw Rectangle" and the linetype tool is named "Fill Line." When you select the tool, you are given a short description of the tool's purpose, properties, and available options. For example, "Draw Rectangle" is the tool name, "Rectangle" is the selected tool type, "2D" is the drawing context, and "Square, 2x2" is the tool's options. Note: The toolbox displays only the standard AutoCAD tools. To see all the tools that are available, go to the Edit menu and choose Options/Window/Tool Palette.
