Press the windows button and R button on your keyboard. In the search box type " -merge_obj". In the list of programs type " AutoCAD > Merge" Enter the name of your project in the field and press OK. A text file will be opened. Double click on the file to launch it. Click on the " New Merge" button to load the Merge OBJ file. Click on the " Close" button to exit the merge tool. A: I'm not sure what you mean by "non-powered tool". Autodesk has at least 3 different components that have "merge" or "merge_obj" actions in them: Autocad (the software you are using) AutoCAD Architecture (the architectural package you are using) Autocad Map 3D (the mapping package) You have at least 2 choices for the output filename: AutoCAD Architecture Save - takes a 3D model and saves it as.arc,.dwg, or.dxf files. AutoCAD Map 3D Export - exports the.map file from the project to a.dxf or.dwg file. Both of these files are "closed" i.e. they are saved in their own file format. If you want to open a.dwg or.dxf file in AutoCAD Architecture or AutoCAD, you will need to open the file with the appropriate software. I'm not sure what you mean by "merge" and "merge_obj" in Autocad. These actions are only available in the Architectural Package. In fact, the actions "merge" and "merge_obj" don't even exist in Autocad, they are in the Architectural package. Here's a link to the Autocad Map 3D User Manual for the actions you are asking about: One final comment: if you are using a non-Windows computer or a computer with a non-English language interface, check that your Autocad installation comes with the correct language files. I see that you are using Autocad 2010. Did you install the appropriate language? a simple matter of fact that there are different rates of progress
