the best and most powerful text editor for Windows. Thanks to its unique architecture, Notepad2 has a lot of features that make it stand out of the competition. Among all the new features there is a tree view in the right click menu to open files, resources and folder in different windows, the ability to manage bookmarks, the possibility to add custom icons for new files, the preview window that lets you see what was typed on a file before saving it and much more. While we made the best of Notepad2, the program's complex nature can be a challenge for some users. That is why we've made some of the functions in Notepad2 optional. For about one and a half years I've tried to use Notepad2 to replace Word but I was just not able to get the hang of it. The biggest issue was simply navigating the syntax highlighting and autocomplete features. Then I discovered SimpleNote (The program offers an UI based on tabs which you can easily navigate with the Tab key. It also offers a number of features which makes it a clear winner over Notepad2. So I'm now using SimpleNote as my main text editor. If you try using Notepad2 I'm sure you'll be pleasantly surprised. Notepad2 is awesome - besides notepad, it's the best thing since the ribbon! All of the features of Notepad are here, the tree-view file browser, and it's resizable! It looks pretty good, it doesn't annoy me with the CPU-usage (with notepad.exe I have to stop the task manager to use my processor), it's intuitive and easy to use, and if you're on a computer with a fast machine you can probably multitask it. People with Mac OS X should try out the super-great Cocoa Text Manger (which is much b7e8fdf5c8

Why You Need It: When printing from many file types and not only from.pdfs, setting up your printer profiles for all the types of files you need to print has become a very frustrating process. Also, the percentage of times you want to print from a document with the high resolution settings simply sits around 1%. How It Works: Print all pages from your iPrintable folders at one time by: Printing from the iPrintable folder containing the documents. Printing from the folder containing the printer profiles. To print from the printer profiles folder, go to File>Print. There you will be presented with an Add Printer dialog box. Select the printer you wish to use by clicking on the Select Printer button. If the printer is listed there, you are set. If not, click on the Add Printer button and then select the printer from the Add Printer dialog box. If you print from the folder containing the documents, it is a simple matter to select the profiles you want to use with each document by dragging them to the printer that you want to use. Ok Paint has not changed much since its introduction into the Windows 95/98 family, but you will feel that they have improved the Paint application a lot. First of all, we have re-written almost the entire application from scratch to provide a more stable, secure and fast Paint application. Stability and security you will find in one of the best functions - full sandboxing. Every part of the application is isolated from one another. You can start editing, then at the end switch to the paint palette, which is safe from your spam, and continue editing. Paint uses user-specific sandboxing so the paint application will be safe, no matter which user is using it. There is also the Copy and Paste feature. As well as clipboard control and much more. The application is very light and fast, due to our new technology (C++). What's new: -Splitter is added to the application to split the canvas into right and left side. -Filter/Effects to achieve various filters effects using the brush. -Color Pick
