Stay up to date with your app by receiving instant updates from the store. 18. Instantly add a new connection. 19. Easily add new view types. 20. Easily add new lists. 21. Easily filter lists. 22. Add one or more cells for a given view. 23. Inline and un-inline cells in a List. 24. Switch between list views. 25. Sort any view and export its contents to Excel. 26. Filter data in any view to see only specific results. 27. Create new data filters. 28. Click-to-copy any data within a cell to the clipboard. 29. Reset any view. 30. Get detailed information about any connection. 31. Customize any view with your own CSS. 32. Automatically detect and filter any data with a custom expression. 33. Drag-and-drop data into any cell. 34. Import, export and work with any file type. 35. Show data in a tree view to sort data in an array/list view. 36. Show data in a table view to sort data in any view. 37. Import any HTML formatted data with a simple web form. 38. Automatically detect and filter any data with a custom expression

What's New In Mobile Admin?

----- Monitor any Windows / Mac / iOS / Android device from the web. Add, delete, and reboot host computers from the mobile app. Get alerts on hosts that aren't responding. Automatically respond to alarms, without having to open the app. Optimize IT Performance
----- Mobile Admin is an IT monitoring tool for IT administrators that enables them to monitor, automate, and respond to Hosts failures. The software not only tracks down performance issues and provides alerts on non-responsive hosts, but it automatically reboots those hosts. It offers convenient support for hundreds of devices including Android, Blackberry, iOS, and Windows devices. In addition, it allows you to add, delete, and reboot hosts from the Mobile Web client. Automatically respond to alarms, without having to open the app. Optimize IT Performance If a host is impacted by resource consumption, Mobile Admin will optimize this host. The software reboots the host remotely (unless the problem requires physical access) to make sure your network performance stays stable and delivers a consistent experience for end users. Mobile Admin is a handy and practical tool that enables you to quickly solve any IT issue, anytime from any mobile device. Running the app in a continuously monitoring mode saves you time and money By monitoring hosts in a continuously monitoring mode, your IT staff can spend more time on quality assurance and capacity planning. This is because it's possible to identify failure trends, identify root causes, avoid disastrous oversupply, increase capacity planning accuracy, and initiate failover plans. The Mobile Admin software also provides insight into IT problems by displaying hosts that are impacted by resource consumption. You can use the software's alert feature to remotely respond to alarms. You can use the alert feature by leveraging the software's intelligent alerting engine. The software uses this engine to automatically respond to alerts, by notifying you and emailing a technician on your behalf. The software works with more than 2,500 servers across seven data centers and more than 100 countries. The software provides a fine balance between ease of use and sophisticated technology, so IT administrators can continue their daily activities without having to master a new tool. Configure Mobile Admin easily You can configure Mobile Admin to run in

continuous monitoring mode. The software offers a few simple options that enable you to automatically manage your mobile infrastructure. For example, you can set the software to automatically reboot hosts or reboot hosts if
